Printavo Hub — Project Plan & Status

Mint Printworks · July 25, 2026 · One consolidated internal platform replacing 11 separate Printavo-connected apps

● **DONE** built, tested, reviewed ● **YOUR TEST** done, waiting on Tyler to validate ● **WAITING** blocked on outside answer/input ● **TABLED** paused, will return
● **BACKLOG** logged, not scheduled ● **READY** unblocked, your call

Punch List — what's waiting on you

1. **Chipply module (new this week):** import a real store (email paste + SalesReport CSV + Margin Report CSV), check the customer-profile Chipply sections and decoration-method breakdowns. Also: **email Chipply support** about scheduled export emails / a data feed — one answer decides whether imports stay manual.
2. **Client 360 + Ask AI (new this week):** browse the Directory, categorize some niches (keyword search + select-all makes it fast), open a few customer profiles, ask Ask AI real questions and save the good ones as presets.
3. **Print Queue (PQ1–PQ3b):** manual printing, bulk status + rules, auto-print, packing slips & box labels — all built, none validated. Packing slips were restyled Jul 24 to near-clone Printavo's template (QR code, size-matrix tables).
4. **Mint Bucks:** click through the 12 pages vs the standalone app. Still need the **MINTBUCKS_APP_URL** value (QR & certificate links error until set) and the Resend email approval; the poller-ownership flip (MB5) stays parked until you say go.
5. **Shipping tools:** try the Rate Estimator (3 API keys need a live check) and the Label Sorter with a real slip + label batch.
6. **Task sync:** LIVE, auto-polling every 5 min (dev only) — keep watching routed tasks, completions both ways, safeguard pop-ups.
7. **Reports UI:** your preset-reports list is still queued behind backend validation (Ask AI presets already cover ad-hoc questions in the meantime).
8. **Publish the Hub** whenever you give the word — one production database step (creating the new Chipply tables) is part of the publish and I handle it then.

Foundation — Sync, Backup & Reports

● **DONE** **Printavo sync engine + speed overhaul**
Everything mirrored to our database. Recent changes land within one 5-min tick; manual Sync Now ~70s; deep re-checks nightly.

● **DONE** **Complete Printavo backup** NEW — built Jul 22–23
Full history back to Feb 2018 (~19k orders; routed around Printavo's hidden 10,000-row list limit), payments to Dec 2017, plus message threads & full history, inquiries, payment requests, merch stores, and all account reference data. Order files (public PDFs, mockups, production files) mirrored into our own cloud storage. One-click full export: ~61 MB ZIP of plain JSON any tool can read. Known limits: pricing-matrix cell values aren't exposed by Printavo's API; packing slips can't be mirrored (login-walled).

● **YOUR TEST** **Order detail + payments history + Reports API**
Backend done (2017→today payments, legacy Insights formulas). Reports UI + your preset-reports list still to come.

Client 360 NEW — built Jul 23

● **YOUR TEST** **Directory + niche categories + niche report**
All ~3,565 customers, biggest spenders first. Assign niches inline or in bulk; keyword search looks INSIDE order nicknames ("soccer" finds schools via their order history) with a select-all-matching button. Niche report uses invoice-only revenue (~$10.4M all-time) so it matches the other reports.

● **YOUR TEST** **Customer profiles**
Per-customer page: lifetime/YTD spend, order frequency, average pieces per order, top styles, decoration-method breakdown, full order history, contacts, niche. This ships the "internal customer portal" backlog idea (branding colors/artwork still deferred).

Ask AI NEW — built Jul 24

● **YOUR TEST** **Plain-English questions over all Hub data + saved presets**
"What was June's invoice revenue?" → AI writes a database query, runs it read-only under strict guardrails (18 whitelisted tables, 5s/500-row caps), answers in a sentence with the table + SQL shown. Save any answer as a preset = a custom report that re-runs instantly with no AI. Verified: June 2026 = $120,058.66.

Chipply Web Stores NEW — built Jul 24–25

● **YOUR TEST** **Store imports — email paste + CSV uploads**
Paste a "Web Store Closed" email or upload a SalesReport CSV (full financials snapshot; re-upload = update). Margin Report CSV adds per-style sales/cost/profit on the store page. Everything passes an editable review step before saving.

● **YOUR TEST** **Live Printavo linking — zero bookkeeping**
The $0 merch shells link themselves via the nickname convention ("553498 Fuel Summer EMB: ..."), including invoices added or renamed later. A "Detected in Printavo" tab lists ~295 not-yet-imported store groups, one click pre-fills the import.

● **YOUR TEST** **Clean separation on customer profiles**
Chipply dollars NEVER mix into Printavo revenue, and shells are excluded from behavior stats (one customer: 31 invoices/734 pcs shown before, 4/227 real). The excluded production gets its own profile block — shell invoices, pieces, top styles, and per-method breakdown — guaranteed complements, never overlapping. Discovered en route: the real nickname method tokens are EMB / HEAT / PRINT (not the EMB/SP/DTF sample).

● **WAITING** **Chipply support answer**
Do they offer scheduled export emails or a data feed? Best case that makes imports hands-off; the import page we built is reused either way.

Vendor Orders / Purchasing — COMPLETE

● **DONE** **P1–P4 — Scan, cart, PO builder, Printavo push, electronic vendor ordering + tracking**
Needs-ordering scan, SanMar + S&S live pricing, warehouse auto-pick, PO Log with locks, write-backs, status suggestions. Live orders proven with BOTH vendors. PIN gate, kill switch, double-order protection, tracking dashboard.

Price Calculator (Breezy Quote port) — COMPLETE

● **DONE** **PC1–PC4 — Full calculator**
Matrices (+CSV import), exact legacy math, 10-col breakdown, vendor price lookup with sale toggle & smart search, PNG export.

Team & Access

● **DONE** **Staff login & roles**
Google/email sign-in, staff allowlist, admin vs staff roles, staff management in Settings, admin PIN in app settings.

● **YOUR TEST** **moMINTum task app inside the Hub**
Full task manager at "Tasks (moMINTum)" — same live database as the standalone app. Staff-gated; one-click nav both ways. Invites, TickTick & Missive stay in the standalone app.

Printavo ⇄ moMINTum Task Sync

- YOUR TEST **Two-way task sync — LIVE, auto-polling every 5 min**
  Smart routing (your-staff → private; order-tied → Production; rest → General), completions flow both ways, deletions clean up twins, safeguard pop-ups on Printavo-linked tasks.
  Rule: auto-sync flag lives in ONE environment only (currently dev) — never both, or tasks duplicate.

Mint Bucks — store credit

- YOUR TEST **Full port — 12 pages, same live database**
  Dashboard, customers, credits, issue/detail, redemptions, rewards, reports, certificates, check credit, settings. Reward/order poller stays OFF in the Hub until you deliberately flip ownership. Emails redirect to you ([TEST→…]) until email mode goes live. Needs MINTBUCKS_APP_URL + Resend approval from you.

Print Queue (Workorder Manager port)

- YOUR TEST **PQ1 — Manual workorder printing**
  Status filters, presets, combined print preview with per-order exclude, attachments toggle, packing-slip links.
- YOUR TEST **PQ2 — Bulk status change + queue rules**
  Safe bulk moves (stale-order guard), rules with off/ask/auto modes, kill switch (default off).
- YOUR TEST **PQ3a — Auto-print to PrintNode**
  Scheduled printing of new workorders + auto status move by decoration type. Double-print protection verified. Safe state: off + dry-run. Test with order #22251 only.
- YOUR TEST **PQ3b — Packing slips & box labels** RESTYLED Jul 24
  Now a near-clone of Printavo's public template: QR code to the order, logo + shop block, billing/shipping columns, per-group size-matrix tables. Rendered from our own data, no Printavo fetch.

Shipping

- YOUR TEST **Rate Estimator ("shipstimator")**
  USPS/UPS quotes from ShipStation + EasyPost side-by-side, weight calc, preset boxes, smart paste for addresses. At Shipping → Rate Estimator.
- YOUR TEST **Slip / Label Sorter**
  Sorts packing slips Style→Color→Size→Order# and pairs the USPS label PDF 1:1, + match report. All 9 presets + custom sort builder. At Shipping → Label Sorter.

Tabled — Returning Later

- TABLED **Cross-vendor catalog search**
  "Navy trucker hat" search across SanMar + S&S with product images; built as a key-protected API your other app can also call.
- TABLED **Branding / artwork / Dropbox on profiles**
  Customer branding colors + artwork references (possibly via Dropbox) — deferred when Client 360 shipped; slots into the existing profile page.

Going Live

- READY **Publish the Hub**
  Your call. One known publish step: the production database needs the new Chipply tables created (handled as part of publishing, not something you do). Task-sync auto-poll flag is dev-scoped, so publishing stays safe.

Backlog & Ideas — Logged, Not Scheduled

Color catalog / database
Hub-built color DB, reusable as the matching catalog for the Breezy app.

Knowledge base — FAQ, SOPs, reference
Centralized internal docs, structured for AI & platform integrations to use.

External analytics hub
Fireflies, JustCall, Google Analytics/AdWords, Meta, RB2B, EmailAnalytics, ActivTrak, Constant Contact… roles in place for access tiers.

Sales & follow-up tools
Proactive follow-up reminders, receivables tracking, custom alerts (order value, customer type, new customer).

Preset reports library
Batch of ready-made reports — working from your list. (Ask AI presets already cover the ad-hoc cases.)

Maintenance & sidework log
With scheduled reminders; may tie into moMINTum.

Outgoing activity log
One audit trail of everything the Hub sends out — what, when, success.

Missive messaging portal
Inbox / messaging inside the Hub via Missive's API.

Public Reorder Portal
Customer-facing reordering, after internal modules settle.

Orders report / dashboard shell counts
Chipply shells still inflate the general Orders report + dashboard counts — same fix as profiles, parked for a decision.

Since last report (Jul 21): Complete Printavo backup shipped (full history, messages, files, one-click export) · Client 360 shipped (directory, niches, keyword search, customer profiles) · Ask AI shipped (guarded plain-English queries + presets) · Chipply module shipped (email + CSV imports, live linking, revenue separation, production & method breakdowns) · packing slips restyled like Printavo's · "Internal customer portal" moved out of backlog — shipped as Client 360. · **Testing rule in force: order #22251 only; #19004 never again.**
