Printavo Hub — Status & Roadmap Review

Updated Aug 7, 2026. A living snapshot for choosing next steps. Detailed reasoning behind each idea lives in `docs/insights-log.md`.

---

1. What's built and live

Module	Status
Printavo sync engine (5-min incremental + daily deep crawl, 12-mo window + frozen historical archive)	✅ Live
Full backup (all entities, file mirroring, one-click ZIP export)	✅ Live
Reports / Payments / Analyze	✅ Live (backend done; more preset reports planned)
Vendor Orders / Purchasing (needs-ordering scan → PO cart → electronic SanMar & S&S submission → tracking)	✅ Live, verified end-to-end
Status Rules engine (suggestion-only)	✅ Live
Print Queue + Queue Rules + Auto-Print (PrintNode)	✅ Live (PQ3b packing slips/box labels remaining)
Price Calculator (Breezy port)	✅ Live
moMINTum tasks (shared live DB with standalone app)	✅ Live
Printavo ⇄ moMINTum task sync	✅ Built (poller dormant until flag flipped)
Mint Bucks (full port, shared live DB)	✅ Live (emails still in test mode — all route to Tyler)
Ask AI insights (guarded read-only LLM→SQL)	✅ Live
Chipply web stores (CH1)	✅ Live (CH2 confirmed as next Chipply step)
Shipping: Rate Estimator + Label Sorter	✅ Live
Pipeline, Customer Directory, Niche Report, Customer Profiles	✅ Live
Global Printavo sync bar (status + Sync now on every page)	✅ Live (Aug 7)

2. Drafted & awaiting your acceptance (tasks panel)

Product Curation Tool — three phases, each building on the last:

1. **Task #5 — Product Finder: cross-vendor stock checker.** Style search across SanMar + S&S at once, color pick, size × warehouse live inventory grid, cross-vendor style aliasing, multi-select, invoice line-item stock check. Mostly UI — vendor lookups already exist under the PO builder.
2. **Task #6 — Descriptive search & color families.** Local product catalog of both vendors with nightly automated refresh (prices/colors/styles; staff tag corrections survive; health panel). AI tags color families + garment attributes

at import time; "forest green polos" style searches run instantly against tags. Inventory deliberately never cached — always live.

3. **Task #7 — Collections & customer curation.** Star/save styles to named collections, link to customers (visible on customer profile), fresh stock re-checks, send-to-Price-Calculator. Sell sheets + push-to-invoice flagged as future follow-ons.

3. Ideas backlog (assessed, not yet planned)

Idea	Feasibility	Key dependency / note
CFO AI assistant (Aug 7)	Feasible — AI layer is the easy part	Needs financial data intake (payroll/labor import) + an order cost-allocation model (stitches/colors/qty as labor proxies, tunable, not hidden in AI) first; email-ROI angle depends on the email hub. Builds on Ask AI machinery. Pattern generalizes to production/sales/purchasing analysts.
Email correspondence hub (Aug 7)	Core very feasible; read receipts weak	Gmail API read-only on CSR inboxes; customer match is exact, invoice match is heuristic + confirm. Track replies, not opens. Feeds the CFO agent's ROI data.
Chipply CH2 (confirmed)	Straightforward	Customer-profile Chipply section, Chipply reporting kept separate from Printavo revenue, CSV imports, reassignment UI.
PQ3b: in-house packing slips / box labels	Straightforward	Renders from local data (Printavo blocks packing-slip downloads).
Internal customer portal (branding, popular styles, categories)	Straightforward	Hub-owned enrichment tables keyed to Printavo customer ID.
Color catalog/database (reusable for Breezy tweak app)	Moderate	Overlaps with curation Task #6's catalog — design once, serve both.
Catalog search API for Tyler's other app (key-authed, images)	Moderate	Same overlap — Task #6's catalog is the natural foundation.
Complete-backup scheduled resync of frozen archive	Moderate	Periodic re-verification pass.
External analytics hub (Fireflies, JustCall, GA, Meta, …)	Larger	Needs role-based access tiers first.
Sales & front-end support tools (follow-up reminders, notifications)	Moderate	Gets much smarter after the email hub exists.
Knowledge base / maintenance log / preset reports library	Straightforward	Independent, schedule anytime.
Stock checker (standalone idea, Aug 4)	—	Superseded — folded into curation Tasks #5–7.

4. Suggested sequencing (for discussion)

1. **Accept curation Task #5** — highest immediate value for sales/CSR, lowest risk, foundations already exist.
2. **Task #6 catalog** next — it also unlocks the color catalog + external catalog-API roadmap items in one build.
3. **Email correspondence hub** as the next new plan after curation — it's a prerequisite for the CFO agent's ROI angle and supercharges the sales support tools.
4. **CFO assistant** staged after that: financial intake → cost model → analyst. The intake/cost-model phases can start earlier if desired — they don't need the email hub.

Loose ends worth remembering: Mint Bucks email mode still test-only (one env-var flip when ready); Printavo⇄moMINTum poller dormant; PQ3b outstanding.
